Art Unit: 2157

1. This action is responsive to the amendment filed on August 13, 2004. Claims 8, 20, 25, 37, 57, and 67 were amended. Claims 71-76 were canceled as they were directed toward a different invention referred to in the previous office action. Claims 1-70, and 77-90 are pending

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1, 4-5, 7-8, 10, 13, 17, 19-20, 22, and 69-70 are rejected under 35 U.S.C. 102(e) as being anticipated by Keesey et al., U.S. Patent No. 6,622,167.

Keesey teaches the invention as claimed including a document shadowing intranet server for passive and active update of requested versions of documents (see abstract).

As to claim 1, Keesey teaches a method for managing data stored in a cache comprising the computer implemented steps of:

providing a first version of data in response to receiving a first request for data (see figs. 2-4; col. 6, lines 1-45, Keesey discloses that a first version of a document requested is served to the client);

detecting, independent of any request for the data, that a second more recent version of the data is available (see col. 7, line 30, Keesey discloses that a request for more recent versions of the document are requested from the origin server);

in response to detecting that the second more recent version of the data is available, retrieving and storing in the cache the second more recent version of the data (see col. 7, lines 1-30, Keesey discloses that a more recent version of the documents

Art Unit: 2157

cached are requested and stored in the cache server);

receiving a second request for the data; and in response to receiving the second request for the data, retrieving the second more recent version of the data from the cache, and providing the second more recent version of the data (see col. 7, Keesey discloses that responses for requests for a document include the recent version of the document).

As to claim 4, Keesey teaches the method as recited in Claim 1, further comprising the step of:

if the second more recent version of the data cannot be retrieved and stored in the cache, then after a specified period of time, attempting to again retrieve and store in the cache the second more recent version of the data (see col. 7, Keesey discloses that in active mode, the cache server makes attempts periodically to retrieve more recent versions of the documents cached).

As to claim 5, Keesey teaches the method as recited in Claim 1, further comprising the step of if, after expiration of a specified period of time from a time when the second more recent version of the data is stored in the cache, no further requests for the second more recent version of the data are received, then deleting the second more recent version of the data from the cache (see col. 7, lines 55-65, Keesey discloses that after a certain time when documents are not requested they are removed from cache).

As to claim 7, Keesey teaches the method as recited in Claim 1, further comprising providing data that indicates whether the second more recent version of the data was successfully retrieved and stored in the cache (see col. 7, lines 30-45).

As to claim 8, Keesey teaches the method as recited in Claim 1, further comprising causing a copy of the second more recent version of the data to be stored at the second cache (see col. 7, Keesey discloses that the recent version of the document is propagated to the lower level cache servers).

As to claim 10, Keesey teaches the method as recited in Claim 1, further comprising generating, based upon a set of logging criteria, log data that indicates one or more activities of the cache (see col. 6-7, Keesey discloses that usage counts are

Art Unit: 2157

updated at the cache servers).

Claims 13, 17, 19-20, 22, and 69-70 do not teach or define any new limitations above claims 1, 4-5, 7-8, 10 and therefore are rejected for similar reasons.

- **4.** The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- **5.** Claims 2-3, 6, 9, 11-12, 14-15, 18, 21, 23-69, and 77-90 are rejected under 35 U.S.C. 103(a) as being unpatentable over Keesey et al., U.S. Patent No. 6,622,167.

Keesey teaches the invention substantially as claimed including a document shadowing intranet server for passive and active update of requested versions of documents (see abstract).

As to claim 2, Keesey teaches the method as recited in Claim 1, further comprising the step of replacing the first version of the data in the cache (see col. 7, Keesey discloses that the older version of data is replaced by the newer version of data).

Keesey does not explicitly teach the limitation of deleting the first version of data. Keesey does teach that the first version of data is replaced by the second version of data (see col. 7).

It would have been obvious to one of ordinary skill in the art at the time of the invention to modify Keesey by specifying the replacement of the first version of data as deleting the first version of data since the same functionality of deleting the first version of data is achieved.

As to claim 3, Keesey teaches the method as recited in Claim 2, further

Art Unit: 2157

comprising the steps of storing, in a location other than the first cache, a request to requests for newer version of the data from the cache, and if the request for newer version of the data from the cache cannot be successfully processed, then after expiration of a specified period of time, retrieving from the location other than the first cache, the request for newer version of the data from the cache, and processing again the request to for newer version of the data from the cache (see col. 6-7, Keesey discloses that requests for newer versions of data are propagated upstream to the second cache server DSS and upon servicing the requests, the first version of data is replaced by the newer version of data)).

Keesey fails to teach the claimed limitation of a "request to delete the first version of data". Keesey does teach that requests for newer versions of data are propagated upstream to the second cache server DSS and upon servicing the requests, the first version of data is replaced by the newer version of data (see col. 6-7).

It would have been obvious to one of ordinary skill in the art at the time of the invention to modify Keesey by specifying the requests for newer versions of data as the requests for deleting the first version of data since the same functionality of deleting the first version of data is achieved.

As to claim 6, Keesey teaches the method as recited in Claim 1, further comprising the steps of storing, in a location other than the first cache, a request to retrieve and store in the cache the second more recent version of the data, and if the request to retrieve and store in the cache the second more recent version of the data cannot be processed successfully, then after queuing the request for a specified period of time, retrieving from the location other than the first cache, the request to retrieve and store in the cache the second more recent version of the data, and processing the request to retrieve and store in the cache the second more recent version of the data (see col. 7, lines 30-50, Keesey discloses that requests for recent versions of data are propagated upstream and queued for servicing).

Keesey does not explicitly teach the claimed limitation of an "expiry" of a specified time period. Keesey teaches that requests for recent versions of data are propagated upstream and queued for servicing.

Art Unit: 2157

It would have been obvious to one of ordinary skill in the art at the time of the invention to modify Keesey by specifying the queuing of requests for newer versions of data to the upstream servers and Internet as a specified "expiry period" since the same functionality of implementing a wait time is achieved.

As to claim 9, Keesey teaches the method as recited in Claim 1, wherein the step retrieving and storing in the cache the second more recent version of the data is performed in response to processing one or more requests from an entity.

Keesey fails to teach the term "authorized entity".

However, "Official Notice" is taken that the concept and advantages of servicing requests from an authorized entity is old and well known in the art.

It would have been obvious to one of ordinary skill in the art at the time of the invention to modify Keesey by specifying the clients as an authorized entity so that only certain users are served data requests.

As to claim 11, Keesey teaches the method as recited in Claim 10, wherein the set of logging criteria includes the presence of the first version of data provided (see col. 7).

Keesey does not explicitly teach the limitation wherein logging criteria includes the "size" of data requested.

However, "Official Notice" is taken that the concept and advantages of using the size of the data requested as a logging criteria by the cache servers is old and well known in the art.

It would have been obvious to one of ordinary skill in the art at the time of the invention to modify Keesey by specifying the size of the data as the logging criteria. One would be motivated to do so to take into consideration network bandwidth when moving large data files across the Intranet.

As to claim 12, Keesey teaches the method as recited in Claim 10, wherein the set of logging criteria includes presence of the first version of data.

Keesey does not explicitly teach the limitation wherein logging criteria includes the an amount of time required to provide data requested.

However, "Official Notice" is taken that the concept and advantages of using the

Art Unit: 2157

an amount of time required to provide the data requested as a logging criteria by the cache servers is old and well known in the art.

It would have been obvious to one of ordinary skill in the art at the time of the invention to modify Keesey by specifying the an amount of time required to provide the data as the logging criteria. One would be motivated to do so to take into consideration network delay when moving large data files across the Intranet.

Claims 14-15, 18, 21, 23-69 do not teach or define any new limitations above claims 2-3, 6, 9, 11-12 and therefore are rejected for similar reasons

Claims 77-90 are rejected for similar reasons as the rejected claims above.

Regarding claims 77-78, Keesey does not explicitly teach the limitation of a "traffic server".

Keesey does teach that document shadowing servers DSS are used as intermediaries between the client and the source server (see fig. 2; col. 6-7).

It would have been obvious to one of ordinary skill in the art at the time of the invention to modify Keesey by specifying the document shadowing servers DSS as traffic servers since the same functionality of implementing a intermediary caching system is achieved.

Regarding claims 79-90, Keesey does not explicitly teach the claimed limitation of a "differencing mechanism".

Keesey does teach a document shadowing program 34 configures the DSS to implement the functionality of the claims above (see col. 5-7).

It would have been obvious to one of ordinary skill in the art at the time of the invention to modify Keesey by specifying the document shadowing program 34 as the differencing mechanism since the same functionality of requesting newer versions of documents independent of requests for the documents is achieved.

6. Applicant's arguments filed August 13, 2004 have been fully considered but they are not persuasive. In the remarks, the applicant argues in substance that; A) the Keesey reference does not teach detecting independent of any request for the data that a second more recent version of the data is available since in Keesey the determination

Art Unit: 2157

of whether a new version of a document is available necessarily depends upon a DSS first making a request for the document from an the Internet; B) the Keesey reference does not teach or suggest the claimed limitation of "in response to detecting that the second more recent version of data is available, retrieving and storing in the cache the second more recent version of the data" since in Keesey a request for a document is not made in response to detecting that a more recent version of a document is available.

In response to A); Keesey does teach detecting independent of any request for the data that a second more recent version of the data is available because in Keesey updates for a newer version of data occur periodically and automatically in the active mode (see the above rejection with respect to this feature particularly col. 7, lines 25-30).

In response to B); In col. 7 of the Keesey reference, in the active mode, the server automatically detects newer versions of all documents in its cache and retrieves them and stores them in cache in response thereto (see col. 7, lines 25-30).

7. THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Saleh Najjar whose telephone number is (571)272-4006. The examiner can normally be reached on Monday - Friday 6:00am-2:30 pm.

Art Unit: 2157
